PROFILE

Recent Computer Engineering graduate from Örebro University with a strong interest in problem-solving, innovation, and building efficient, user-focused solutions. I thrive in challenging environments where I can take responsibility, collaborate with others, and deliver results within deadlines. I continuously seek to grow through new experiences and technical challenges.

TECHNICAL SKILLS

Programming Languages: C, C++, Java, SQL, Assembly

Frontend: React, TypeScript, JavaScript, HTML, CSS

Backend: C#, .NET, Node.js, Express.js, REST APIs, WebAssembly

AI / Scientific Computing: Python, MATLAB, Machine Learning, SciPy, Control Theory, LQR, RK4

Tools & Workflow: Git, npm, Vite, Emscripten

PROFESSIONAL EXPERIENCE

AI Engineer — ARC - AI, Robotics and Cybersecurity Center, Örebro University **May 2026–Present**

Selected for the ARC Internship Program focused on AI, machine learning, and real-world innovation projects in collaboration with researchers and industry stakeholders.

- Collaborate on real-world AI, machine learning, RAG and LLM challenges
- Develop and deliver innovative pilot project solutions
- Work alongside researchers, mentors, and industry stakeholders
- Present project outcomes at the final showcase and demo

Bachelor Thesis – AI-Based Image Analysis, Ekobot **Apr 2026 – Jun 2026**

Development of a machine learning system for automated pest detection in autonomous robotic systems.

- Designed and trained CNN models for image classification
- Processed and structured large image datasets
- Optimized model accuracy and performance
- Implemented solutions for real-time inference

Teaching Assistant – Databases, Örebro University

Nov 2025 – Jan 2026

Supported students in both theoretical and practical database concepts

- Guided students in ER modeling, SQL, and database design
- Provided detailed feedback on assignments
- Contributed to structured and fair grading

Teaching Assistant – Mathematics, Örebro University (part-time)

Aug 2024 – Sep 2025

Helped engineering students understand complex mathematical concepts

- Supported problem-solving during exercises and sessions
- Assisted in grading exams
- Explained theories in a clear and structured way

Test Leader – PIA Project, Örebro University

Feb 2024 – Jun 2025

Led development-focused activities for newly arrived youth based on psychology-driven methods.

- Planned and conducted weekly sessions
- Adapted activities based on group needs
- Strengthened participant engagement and confidence

Marketing Manager, FemTek ORU

Aug 2024 – Jan 2025

Responsible for marketing initiatives and external collaborations.

- Developed and executed marketing strategies
- Created content for social media
- Established partnerships with external organizations
- Collaborated closely with the board

PROJECTS

AI PDF Filler System (In Progress)

Tech: Python, PostgreSQL, React, TypeScript

An intelligent system for automatic analysis and completion of PDF forms using AI.

- Designing an AI-driven pipeline for document understanding
- Integrating frontend and backend for seamless interaction
- Working with structured data storage and processing
- Focusing on automation of repetitive manual tasks

Inverted Pendulum Simulator - (pendulum.nouramouri.com)

Tech: C++, WebAssembly, LQR, RK4, Emscripten

A real-time inverted pendulum simulator modeling autonomous stabilization and control dynamics.

- Implemented RK4 integration for accurate real-time physics simulation
- Developed an LQR controller for autonomous stabilization
- Compiled C++ to WebAssembly using Emscripten
- Developed real-time browser visualization using HTML Canvas and JavaScript

Creative Portfolio - (nouramouri.com)

Tech: React, TypeScript, JavaScript, CSS, Vite, Node.js

An interactive personal portfolio with a modern, responsive UI and integrated backend for communication.

- Built a full-stack application using React and Node.js
- Developed a responsive and mobile-friendly interface
- Implemented a backend-powered contact form
- Focused on clean design and user experience

Stamp Clock System

Tech: React, TypeScript, CSS, Vite

A user-centered time tracking system designed using established UX principles.

- Designed interface using Nielsen's heuristics and Norman's design principles
- Iteratively improved the UI through prototyping and testing
- Focused on clarity, feedback, and intuitive user flows
- Delivered a simple and predictable user experience

Pedestrian Evacuation Simulator

Tech: Java, Object-Oriented Design, Software Architecture, Algorithms

An evacuation simulation system modeling crowd movement using pathfinding algorithms.

- Simulated 1000 agents navigating a 2D environment
- Implemented BFS pathfinding for efficient route calculation
- Designed a layered architecture for maintainability
- Developed real-time tracking with timers and exit counters

EDUCATION

Bachelor of Science in Computer Engineering, Örebro University 2023 – Jun 2026

A 3-year program that includes areas such as programming, algorithms, data structures, and systems development

AREAS OF EXPERTISE

Computer science areas

Real-Time Systems, Object-Oriented
Programming, Artificial Intelligence,
Algorithms, Data Structures

Language

Swedish	Professional proficiency
English	Professional proficiency
